PROJECT :

E-Commerce:

Product Management: In this Admin is able to add products to the product page with details such as product name, category, image, and price. Additionally, it allows for updating product details and completely deleting products.

Product Selection: In this user can browse products based on their categories, add them to their cart, and adjust the quantity as desired.

Profile Customization: In this user can modify details such as their name, profile image, and address based on their mobile number or email. However, changing their mobile number or email is restricted; they must send an email to support for such changes.
- Team Size: 6
- Technology Used: .NET Core MVC, Entity Framework, MS SQL, Stored Procedure, CSS, Bootstrap.

HRMS (Human Resource Management System)

Payment Slip Generation: In this module, HR can send payment slips based on employee IDs, which are then emailed to the employees. Slip generation operates on parameters such as leaves and present days, utilizing stored procedures. On the Employee Portal, employees can view and download their payment slip PDF. The iTextSharp Library is employed for generating the payment slip PDF.

Interview Scheduler: Candidates can book interview slots for specific days and time slots. Once a candidate has a scheduled interview, they will receive an email notification on their email address, they cannot book another slot. On the HR portal, HR personnel can view and download candidates' resumes.

Calendar Event: In this HR can add events to the calendar, such as holidays, organization events, or birthdays. Each event is displayed in a different color for easy identification. When an event coincides with the calendar date, a notification is sent. This functionality operates using triggers.
- Team Size: 6
- Technology Used: ASP.NET Web Forms, MS SQL, Stored Procedure, CSS, Bootstrap.
