**LinkedIn:** <https://www.linkedin.com/in/devbrat-kumar-saha-b09a2119a>

**Portfolio:** <https://devbrat3.github.io/Portfolio/>

## CAREER OBJECTIVE:

As a Full Stack Developer proficient in C, .NET, my goal is to further refine my skills and become a top-tier developer known for delivering robust and innovative solutions. I am dedicated to continuous learning and staying updated with emerging technologies to excel in my craft and make significant contributions to the software development industry

## INTERNSHIP & TRAINING

**Java Full Stack Development – Wipro** | Jul 2025 – Oct 2025

Completed an industry-oriented Java Full Stack training program covering Core Java, OOP, HTML, CSS, JavaScript, JDBC, Servlets, JSP, and Spring Boot. Developed CRUD-based applications integrating frontend, backend, and databases using MVC architecture. Successfully cleared all milestone-based assessments with a 97% aggregate score, demonstrating strong logic-building, problem-solving, and coding proficiency.

## SKILL:

- Programming Languages: C, C#, C++, Java, PHP, JavaScript, Python
- Frameworks & Technologies: .NET MVC, ASP.NET Core, Angular, React, Node.js, Spring Boot, Django, WCF/WPF
- Web Development & APIs: Web API, Web Services, RESTful APIs, GraphQL, HTML5, CSS3, Bootstrap
- Machine Learning: NumPy, Pandas, Scikit-learn, Jupyter Notebook, Natural Language Processing, Data Handling & Visualization.
- Database Technologies: Oracle, SQL Server, MS SQL, ADO.NET, MySQL.
- Operating Systems: Linux (Ubuntu), Windows.
- Cyber security: Network Security, Penetration Testing, Firewalls & VPNs, Intrusion Detection/Prevention (IDS/IPS), SIEM Tools, Network Traffic Analysis, Basic Forensics, Malware Analysis, Cloud Security Fundamentals, Vulnerability Assessment, Ethical Hacking, Identity & Access Management (IAM).
- Version Control: Git, GitHub, GitLab
- Project & Management: SDLC, Requirement Analysis, Agile Project Planning, Risk Management

## PROJECT

### 1. VR Simulator for Enhancing Cricketers' Performance Using Virtual Perception Training

*Galgotias University | Nov 2025 - Present*

Designed and developed a scenario-based Virtual Reality cricket perception training system using Unity to improve visual anticipation and reaction timing in batters. Implemented physics-driven ball simulation (gravity, drag, spin, bounce) and integrated eye-tracking analytics to capture gaze behavior, fixation timing, and reaction metrics. Built modular training scenarios (fast, spin, yorker) with synchronized data logging and session-wise performance analysis. Validated the system through quantitative evaluation, demonstrating measurable improvements in reaction time, gaze stabilization, miss rate, and shot timing accuracy compared to a desktop baseline.

### 2. Student Feedback Insights – QCM Form Data Analytics

*Galgotias University | Apr 2025 – Aug 2025*

Developed an end-to-end data analytics solution to transform QCM-based student feedback (1–5 rating scale) into actionable academic insights for teaching improvement. Led data collection, cleaning, validation, and classification of feedback across courses and parameters such as clarity, responsiveness, and teaching style using Python, Pandas, and NumPy. Applied data visualization and basic machine learning techniques (clustering) with Matplotlib, Seaborn, and Plotly to identify trends, low-performing areas, and improvement opportunities. Produced an analytical report with interactive insights and recommendations, demonstrating strong capability in data processing, visualization, and insight-driven reporting.

### 3. Stress Detection Using NLP and Machine Learning

*Galgotias University | Nov 2024 – Jan 2025*

Developed an intelligent system to detect and classify stress levels (low, moderate, high) from user-generated text such as social media posts and chat messages. Designed an NLP preprocessing pipeline (tokenization, lemmatization, stop-word removal) and implemented multiple ML/DL models including SVM, Random Forest, RNN, and BERT for robust text classification. Integrated sentiment analysis to enhance emotional cue detection and evaluated models using accuracy, precision, recall, and F1-score. Visualized results and performance trends using Python libraries, demonstrating strong capability in NLP, machine learning, and model evaluation.

### 4. Human Resource Management System (HRMS)

*Sido Kanhu Murmu University | Dec 2022 – Mar 2023*

Developed a web-based Human Resource Management System to automate core HR operations using ASP.NET Web Forms and MS SQL Server. Implemented modules for salary slip generation using stored procedures and PDF creation via iTextSharp, along with an interview scheduling system featuring slot booking and automated email notifications. Designed a calendar and notification module for organizational events and holidays using database triggers. Collaborated in a six-member team, demonstrating strong skills in backend development, database integration, and enterprise-style application design.

### 5. E-Commerce Book Store Application

*Sido Kanhu Murmu University | Apr 2022 – Sep 2022*

Developed a full-stack E-Commerce Book Store application using .NET Core MVC, Entity Framework, and MS SQL Server. Implemented admin-driven product management (add, update, delete books with categories, images, and pricing) and user-side product browsing and cart management with quantity control. Built secure profile management allowing updates to user details while restricting changes to critical identifiers (email/mobile) via support workflow. Worked in a six-member team, demonstrating proficiency in MVC architecture, database design, and scalable web application development.
